Martin's Decorative Stone is a small company based out of Aberdeen. We can make your old concrete look like new...and pools are our specialty!

This is accomplished by putting down a decorative rock that goes over old concrete. The rocks we use come in various sizes and are taken out of river beds in Arkansas. The two-part epoxy system we use is actually harder than concrete when it dries.

There are three huge benefits to our product, especially in hotel applications.

- It can go right over old, cracked, discolored concrete. All imperfections are hidden by the rock.
- It creates a certain atmosphere that makes it feel more like a beach or resort than a concrete jungle.
- It holds up outstandingly to chemicals and it takes minimum maintenance.

The rock is porous so water goes through it and runs whichever way the concrete is sloped, reducing the amount of standing water (and safety hazards) around the pool or spa. It comes in multiple colors and can even be done vertically on steps or walls. Borders or designs can also be added.

Our client list includes the Ramada Inn in Aberdeen, St. Joseph's Indian School in Chamberlain and many residential pools.
